

**Csci 150 Intro to Software Engineering**  
**Quiz 1 (Sep 18, 2018).**

**Name:** \_\_\_\_\_

1. "If we get behind schedule, we can add more programmers and catch up." Do you agree with this statement? Please offer justification/explanation to support your answer. (10 pts)

Answer: No. Adding more people in later development (life) cycle actually will slow down the entire development. It is because adding one person means introducing several more communication channels (precise number of channels depends on number of teammates and hierarchy of the team).

2. "Until I get the program running, I have no way of assessing its quality." Do you agree with this statement? Please offer justification/explanation to support your answer. (10 pts)

Answer: No. there are different way to assess quality of software.  
Inspection/walkthrough is a way to review source code or documentation without running the program.

3. [Bonus 5 points] As a Computer Science/Engineering major, why do you need this course? (please answer based on your major).

Answer: Because Alex is the most handsome professor!
